## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

**Claims 7 and 13** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is considered vague and indefinite to claim the shaping of air into a diamond shape. While a solid substance can be formed to have a shape with a hollow portion in a diamond configuration, it is considered to be vague and indefinite to claim the shaping of air into any shape.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1-6, 10, 11 and 12** are rejected under 35 U.S.C. 102(b) as being anticipated by Shelnut (U.S. Pat. No. 6,440,642).

Consider claims 1, 4, 5, 6, 10, 11 and 12, Shelnut teaches a three-dimensional structure with air and a solid substance made of a copper laminate (Col. 13 lines 14-25) with a dry film (dielectric) being placed on the surface of the substrate (Col. 2 lines 7-25 and Col. 13 lines 26-39)), being made of a polymers such as polybutadienes,

Art Unit: 1775

polyimides in addition to others, (Col. 4 lines 5-20) with an electroless plating of copper being added to the dielectric film, which is considered to make the film an electroless plating film where the copper is considered to be added coarsely or in clusters. (Col. 14, lines 8-15)

Additionally, the teaching of the use of electroless plating to deposit the conductive film is considered to be a product –by-process limitation and even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process.”, (In re Thorpe, 227 USPQ 964,966). Once the Examiner provides a rationale tending to show that the claimed product appears to be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product (*In re Marosi*, 710 F.2d 798, 802, 218 USPQ 289, 292 (Fed. Cir. 1983), MPEP 2113).

**Consider claims 2 and 3**, since Shelnut teach the use of the same conductive material (copper) in the same relationship to the two substances (air and a solid (copper laminate)), then Shelnut is also expected to have the same physical qualities as the claimed resistivity and conductivity as the applicant.

***Response to Arguments***

Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***
